

CASE STUDY – Environmental Management – System Redesign

**Profit
Athens**

**One of the leading
detergent companies
in Greece**

The Challenge

HENKEL requested to simplify the already running Environmental Management System, in order to become more effective, efficient and focus on bottom line results.

The Solution

After reviewing all directly and indirectly related systems in Greece and abroad, we designed a system that utilized existing management practices (e.g. communication, policies), rather than develop stand alone ones.

This resulted a simplification of over 60% and reduction of respective time required to manage the EMS.

“Beyond delivering promises on time, STREAM achieved significant simplification of our Environmental Management System, improving both effectiveness and efficiency.”
